SERVING CENTRAL ILLINOIS FOR 5 GENERATIONS!

ATTIC INSULATION

Fiberglass

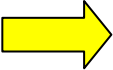

Cellulose

Blowing insulation into your attic is a fast and easy way to save money on your energy bills.

Heat flows naturally from a warmer to a cooler space. In the winter, this heat flow moves directly from all heated living spaces to adjacent unheated attics, garages, and basements, or to the outdoors; or indirectly through interior ceilings, walls, and floors--wherever there is a difference in temperature. During the cooling season, heat flows from outdoors to the house interior. To maintain comfort, the heat lost in winter must be replaced by your heating system and the heat gained in summer must be removed by your air conditioner. Insulating ceilings, walls, and floors decreases this heat flow by providing an effective resistance to the flow of heat.

COOLER IN THE SUMMER * WARMER IN THE WINTER
